CONSENT AGREEMENT

Weston County Weed and Pest is conducting a program to mitigate the effects of the Mountain Pine Beetle (MPB), both on public and privately owned lands.

This program involves crews walking through forested lands to identify and mark trees that are infested with the beetle, other crews will follow at a later date to cut the infested trees, followed by another crew to check on the results of the cutting.

Weed and Pest crews will perform their work in areas designated by the landowner. Work is currently planned for the fall starting about **September 2014 through March 2015 season and again from September 2015 through March 2016**. There may be some inspections of treatment that occur between March and September to monitor the effectiveness of treatments and to gather data for Best Treatment Practices.

Every effort will be made to contact landowners before treatments are done, however this may not always happen and greatly appreciate your cooperation with this program.

I, _____ consent to giving the Weston County Weed and Pest access to perform Mountain Pine Beetle mitigation work on my land.
